DRYFLUID CA BOOSTER

NEW 2018 !

HRC6049 DryFluid CA-Booster

The market offers a wide range of adhesives for a wide variety of applications and material compounds. The range of applications extends from simple standard adhesives to power adhesives in the one- or two-component area. DryFluid CA-Booster is positioned precisely in the group of power adhesives. The powder combines the advantages of the instant adhesive with the system advantages of a high-performance plastic and combines them into an unprecedented high power adhesive.

- ◆ 2K system plastic with glass fibre bridges for high impact and tensile strength
- ◆ Makes superglue modelable and enables the build-up of layers as well as the filling of joints
- ◆ Enables precise application without having to worry about the adhesive running off.
- ◆ Response time can be individually adjusted to individual requirements by using low, medium or high viscosity instant adhesives
- ◆ No exact adherence to mixing ratios as required for classic 2-component adhesives
- ◆ Low material weight and therefore especially suitable for model making applications
- ◆ Very good adhesion on surfaces and extreme durability of the joints
- ◆ Easy to rework by drilling, arrows and grinding
- ◆ Significantly increased toughness and fracture resistance compared to previous filler powders and no abrupt, sometimes uncontrolled curing.
