- Case material: Steel

### Starter Box Features

- Dual brushed motors
- Adjustable alignment pegs
- Powder-coated steel case
- Two battery configurations
- Two-position starter wheel
- External power jacks
- Comfortable molded handle

Venom's Nitro Starter Box is designed to work with 1/8-scale and 1/10-scale buggies and stadium trucks. The unit is loaded with features, and is able to be powered by two different sources. Racers can use either two six-cell 7.2-volt stick packs or one standard 12-volt gel cell. Complete hardware and battery holders are provided for both setups, and wire harnesses for both configurations are included. Dual brushed motors provide plenty of raw starting power via a belt drive to the start wheel. The box will start any glow motor in the recommended range. What's more, the starter wheel can be moved lengthwise or widthwise to accommodate any style chassis.

*Dual brushed motors are factory wired with harnesses provided. Starter wheel can be mounted in either of two positions in rugged steel case.*

The unit's design includes plenty of slots to configure the alignment pegs, which allow the Nitro Starter Box to hold almost any vehicle, no matter what brand or style your customer might have. On the outside control panel, built-in 12-volt jacks make it easy to recharge the internal batteries or power a 12-volt accessory.

*Battery holders and harnesses are provided for 12-volt gel-cell and two 6-cell stick packs.*

The case is made of strong steel, and features a powder coated finish for durability under extreme conditions and good looks for a long time to come. A rugged and ergonomically molded handle is also fastened to the front of the case, which makes the box comfortable to carry.

Venom's Nitro Starter Box (VEN-201) is available now, and carries the retail price of \$79.99. **HM**
